NordicPulver

Powder coating gun NordicPulver PRO+ in suitcase

NordicPulver PRO+ powder coating gun is professional powder coating equipment made to be used by professionals and hobbyist users at an affordable price. NordicPulver PRO+ comes in a case and is supplied with a water filter, air pressure regulator attached to the gun and clip on wire connector. Moreover, it comes with 2 spare containers for the faster color change between coatings.

Features:

- Simple, but sturdy and reliable design
- Fast and easy powder color change
- Does not require any additional power supply
- Comes with a funnel to fill up powder to the bottle faster and easier
- All the spare parts are available for sale

How to use:

- Prepare your workpiece by removing all the old paint and degrease it
- Spray a workpiece with a powder coating gun using powder of your chosen color
- Put a workpiece inside an oven (not included) for 20 minutes at 180 degrees celcius
- Once workpiece is cool it is ready to be mounted and used.

How it works:

Powder coating gun works by charging powder particles inside gun using friction between powder and PTFE plastic. After this powder sticks to part by electrostatic charge. This is very similar to dust sticking to the screen of your computer or tv. Powder sticks securely and part can be shaken before curing. This process is different from other processes where powder is charged by up to 100 000 kilovolts to make it stick to part as it produces no orange peel effect that is often associated with powder coating. This process is also safer because of the absence of such high voltage.
